Town of Avon is completing the road maintenance projects for 2009

Avon, Ind: The Town of Avon is completing the road maintenance projects for 2009. The projects utilize innovative methods to preserve and extend the life of the roads.

The methods include crack sealing to prevent potholes and sealants to extend the life of new pavement.

Older roads will be paved and certain areas throughout Town will receive a full depth patch of asphalt which means that the old asphalt is dug out and replaced with new asphalt.

The innovative methods are less expensive than paving and enable the Town to take proactive measures to limit the long term maintenance costs of the roads.

The unit costs of each project are:

Crack Sealing - .25 cents per square yard

Sealant - \$1.00 per square yard

Paving - \$3.80 per square yard

The projects are part of a five year maintenance plan that involves an evaluation and condition ranking of every street in the Town. The condition ranking determines the type of maintenance measures for the street. It is part of the Town's objective process to determine the road projects for each year.

Here is a list of roads that are scheduled for maintenance in 2008:

SEALANT

HMA Seal is a liquid absorption process that induces asphalt flexibility preventing crumbling and increasing the life of the surface anywhere from one to five years.

1. Oak Bend
2. Austin Lakes

3. Hollowbrook
